Professional Summary

Cybersecurity Engineering graduate with hands-on experience in penetration testing, vulnerability assessment, and security operations. Conducted client-facing black-box and grey-box assessments, identifying critical vulnerabilities and high-risk security misconfigurations across web applications and infrastructure. Built practical defensive security experience through Wazuh-based SIEM monitoring, detection engineering, and adversary simulation. Strong foundation in Python, Bash, Linux, web application security, and security tooling, with OSCP currently in progress.

Technical Skills

Offensive Security: VAPT, Web Application Security, SQL Injection, LFI, RCE, Privilege Escalation
Security Tools: Burp Suite Professional, Metasploit Framework, Nmap, Wireshark, Nessus, OpenVAS, Hashcat
Defensive Security: Wazuh SIEM, Splunk, Sysmon, Alert Triage, Detection Engineering, MITRE ATT&CK
Languages & Scripting: Python, Bash, PowerShell, SQL
Infrastructure: Kali Linux, Windows Internals, TCP/IP, AWS Core Services, Docker, Git

Professional Experience

Forte WebAsha Technologies Pvt. Ltd.

Jan 2026 – June 2026

Cybersecurity Intern

Pune, India

- Conducted black-box and grey-box penetration tests across 6–7 client-provisioned web applications, identifying and validating 10–12 vulnerabilities ranging from Critical to Medium severity, including RCE, SQL Injection, and XSS.
- Identified high-risk security weaknesses including outdated CMS/plugin versions, exposed Telnet services with default credentials, IDOR vulnerabilities, plaintext credentials over FTP, and excessive permissions on password hash files.
- Performed vulnerability exploitation and post-exploitation activities to validate impact, including privilege escalation and administrative access on vulnerable systems.
- Authored 6–7 technical security reports documenting exploitation methodology, evidence, risk impact, and actionable remediation recommendations.

Technical Projects & Lab Engagements

Enterprise SOC & Detection Engineering Lab | *Wazuh, Sysmon, MITRE ATT&CK*

Aug 2026

- Built and deployed a Wazuh-based SOC lab with Windows endpoints and Sysmon to collect and monitor system and security telemetry.
- Engineered and tuned custom detection rules, assigning severity levels and mapping security events to relevant MITRE ATT&CK techniques.
- Simulated adversarial activity and investigated generated alerts, applying alert triage and analysis to distinguish legitimate security events from false positives.

OffSec Proving Grounds (Practice & Play) – 50+ Targets

Apr 2026 – June 2026

- Compromised and escalated privileges across 50+ Linux and Windows lab environments through structured reconnaissance, enumeration, exploitation, and post-exploitation workflows.
- Applied manual exploitation techniques involving misconfigured SUID binaries, service vulnerabilities, credential weaknesses, and Active Directory enumeration.
- Documented attack paths, reconnaissance findings, exploitation techniques, and remediation considerations through technical write-ups published on Medium.

ReconForge – Automated OSINT & Reconnaissance Framework | *Python, Bash, APIs*

July 2026

- Developed a modular command-line framework for automating penetration testing reconnaissance, integrating DNS enumeration, directory discovery, and WAF fingerprinting.
- Implemented parallel execution and automated JSON/HTML reporting to streamline reconnaissance workflows and reduce repetitive manual tasks.

Certifications

OSCP (Offensive Security Certified Professional) | *Offensive Security*

In Progress

Cisco Certified Support Technician: Ethical Hacker | *Cisco Networking Academy*

Nov 2025

Cisco Certified Support Technician: Endpoint Security | *Cisco Networking Academy*

Dec 2024

AWS Academy Graduate – Cloud Foundations | *Amazon Web Services (AWS)*

Oct 2024

Education

SR University

Sep 2022 – June 2026

Bachelor of Technology (B.Tech) in Computer Science – Specialization in Cyber Security

Telangana, India
